Globe Wireless

Globe Wireless Aboard Princess

Globe Wireless recently completed the installation of its VSAT communications system aboard the Ionian Princess, a privately owned and chartered yacht based in Athens, Greece. VSAT's Solution Rack provides a simple plug-and-play network. The rack is separated into three sections: The admin network allowing Globe Wireless to remotely monitor and maintain the system, the business network allowing browsing and VPN connections back to the office for the owner and captain, and the crew network providing limited access to web browsing for the crew and passengers. When the ship is chartered, Internet usage can be carefully monitored and controlled.
